AreWeThereYet.java

Directions:  Write a program that will use a loop to iteratively print "Are We There Yet?," then an appropriate response ("No, 45 miles to go") every 5 miles of a 50-mile journey. Once you get there, print an appropriate statement.  Be sure to follow PANDAs and our good programming conventions such as no work done in main().  Include three methods:  main, run and printLines.  If you have finished early, write v2 with a different loop.
