

Study Road Map for AP Chemistry

What you should be doing -Write down the key words, take notes on the key concepts, make connections between the key concepts using concept maps, draw pictures, pause the podcast to do the problems, do the review problems while watching the podcast, most importantly, write the questions that you need clarification for.

Students work collaboratively and critique other's work by using voice thread. More details later

Students work collaboratively to show their understanding of a performance task and solve problems in small group situations

Review with powerpoints, summary notes and make your own notes. Take practice exams from the website and do the problems on the reviews.
